VividCoater XDC Series

The Vividcoater XDC Series

incorporates a wide range of options in size and automation, but always produces the same uncompromising quality in finished pieces while protecting against friction and fading. Compared to conventional solvent based coatings the VividCoater produces virtually no Volatile Organic Compounds (VOC's) and is considered to be environmentally friendly. The VividCoater Series versatility enables users to run our UV Coaters inline with any creasing or feeding unit. The 'A' models own deep pile feeder and the XDC-750 RS receding stacker provide fully automated solutions to provide users with easy and effective options at a very low cost.

The Vividcoater XDC 370M was designed with automation in mind. Packed into the small footprint the 370M boasts touch screen controls and comes standard as a 3 pump system for quick and automated coating change over and cleanup. Ideal for inline installations to any digital print engine or inline GW creasing and feeding devices.

The Vividcoater XDC 530 Micro is a low maintenance, ultra-violet cured coating system which offers more effective and lively printed products at an exceptionally low cost per page. For superior quality printed pieces in one pass, pair the XDC-530 Micro with an inline creasing unit to create an operational powerhouse.
